

This is Yari

Yari runs a growing tech retailer. This synthetic story assumes \$47m in annual revenue. An enterprise partner now asks her team to complete a security questionnaire before onboarding.

Today

Owner, operator, with a finance team of 5

An enterprise partner asks Yari's team for evidence of its security controls

Her team of 5 keeps the business running while the review adds work

The answers live across documents and conversations

1

Questionnaire arrives

The partner asks about access, backups and incident response.

2

Evidence is scattered

Policies, procedures and past answers sit in different places.

3

Missing details

Some answers still depend on Yari or the IT owner.

4

Review is delayed

Repeated questions and conflicting records slow the response.

Her team knows the business. Proving every security answer still takes time.

Policies describe intended controls. Recent messages may reveal exceptions. Her team must resolve both.

Yari's problem

Yari needs evidence she can inspect, with missing details clearly flagged. She wants to support her current team of 5.

ENTER MANDATE

MANDATE becomes Yari's AI security analyst

Mandate searches approved sources first, drafts answers with citations, and asks focused follow-up questions only when information is missing or contradictory.

The division of work

AI gathers the evidence. Yari's team reviews and authorizes every final answer.

A short conversation fills a real evidence gap

Mandate checks the documents before asking Yari for a missing detail

USER INPUT

Backups

User-confirmed

- ✓ Backups in place? Yari answers yes.
- ✓ How often? Yari confirms daily.
- ✓ Automated? Yari confirms yes.
- ✓ **Saved with owner and time. Evidence pending.**

Two sources disagree about MFA coverage

Mandate keeps the answer unresolved until the owner checks the exception

CONFLICT

Review before answering

Is MFA required for all users?

The policy says MFA covers every user.
IT reports a contractor exception.

The scope remains unresolved.

Security policy

All users covered

IT message

Exception reported

Yari's team reviews the answer and its evidence

Every draft keeps its status. Contradictions stay open until a responsible owner resolves them.

1

Verified from documents

Linked to a specific document and passage.

2

User-confirmed

Recorded with the owner's name and time.

3

Unknown or disputed

Yari chooses what can be submitted.

THE OUTCOME

Yari keeps her team and owns the final security response

Mandate reduces repeated evidence collection and preserves the review trail. The pilot measures review time, citation coverage and unresolved answers. It makes no headcount or savings promise.

Human in the loop

Yari's team approves the response before export
